Generating Utilities to update status.

A.13. Approval of Temporary Operational Arrangement for 220 kV Adhydro-Phozal-Nalagarh Circuits (Agenda by ADHPL)

- A.13.1. ADHPL has informed that The **220 kV Phozal (HP) – Nalagarh (PG) (ADHPL) Ckt-1** has been non-operational since **20 August 2025 at 11:08 Hours**.
- A.13.2. This outage was initially attributable to the collapsing of Tower Nos. 157 & 158 of the D/C 220 kV AD Hydro - Nallagarh Transmission Line but the outage of this line still continues till date due to the collapse of Tower No. 1 on the HPPTCL owned D/C LILO of the 220 kV Phozal–Prini and Phozal–Nalagarh transmission line (6.7 km section) on 26 August 2025 at 12:20 Hours even after the restoration of the Tower Nos. 157 & 158 of the D/C 220 kV AD Hydro - Nallagarh Transmission Line at 13:33 Hours on 08-10-2025.
- A.13.3. HPPTCL is yet to start the erection of their Tower No.-1 which is proposed to be relocated at a different location. With the approaching season, we are anticipating a significant rise in water discharge and consequently, increased power output from the generating stations. With the present arrangement it shall not be possible to evacuate the entire power about 265 MW in the high flow season through the 220 kV AD Hydro(AD)-Nallagarh(PG)(ADHPL)Ckt-1.
- A.13.4. HPPTCL have temporarily restored the 220 kV AD Hydro(AD)-Phozal(HP) (ADHPL) Ckt-1 by stringing the conductors directly from Tower No.-2 to the gantry.
- A.13.5. Currently, both ADHPL and the HPPTCL IPPs are solely dependent on the 220 kV AD Hydro(AD)-Nallagarh(PG) (ADHPL) Ckt-1 for power evacuation. However, the carrying capacity of this single circuit is limited to only 240 MW. This single contingency poses a severe bottleneck for power evacuation during the upcoming high-discharge period and risks system instability or forced generation curtailments.
- A.13.6. In order to mitigate this risk and ensure reliable operation of all dependent IPPs and ADHPL, ADHPL has proposed a temporary arrangement which involves the following modifications to the existing network:

1. **Cross-jumpering:** Cross-jumpering at a location between Tower no. 2 and Tower No. 24 (HPPTCL-owned D/C LILO of the 220 kV Phozal–Prini and Phozal–Nalagarh transmission line (6.7 km section)) in the Phozal area.
2. **Reconfiguration:** Under this plan, 220 kV Phozal(HP)-Nalagarh(PG) (ADHPL) Ckt-1 will be charged to connect the Phozal end to Nalagarh dedicately.
3. **Isolation:** 220 kV AD Hydro(AD)-Phozal(HP) (ADHPL) Ckt-1 will be isolated from this network by opening the jumpers at the same location.
4. 220 kV AD Hydro(AD)-Nallagarh(PG) (ADHPL) Ckt-1 will be dedicately connected to ADHPL and HPPTCL Prini.
5. The relay settings of the 220 kV Phozal–Prini bay will be changed and matched with the relay settings of the 220 kV Phozal(HP)-Nalagarh(PG) bay.

A.13.7. Expected Outcome of this Temporary Arrangement:

- ADHPL and HPPTCL end at Prini will be able to evacuate 208.46 MW plus 24 MW = 232.46 MW via the existing 220 kV AD Hydro(AD)-Nallagarh(PG) (ADHPL) Ckt-1.
- The HPPTCL IPPs at Phozal end will be able to feed their power (max. up to 50 MW) via the reconfigured 220 kV Phozal(HP)-Nalagarh(PG) (ADHPL) Ckt-1.

A.13.8. This temporary measure will allow to utilize both corridors effectively, strategically avoiding the bottleneck caused by the collapsed tower and ensuring uninterrupted power flow during the peak season until HPPTCL completes the permanent restoration of Tower No. 1.

A.13.9. ADHPL has requested approval for the proposed temporary cross-jumpering arrangement.

Members may kindly deliberate.

A.14. Augmentation of 400 kV S/Stn BBMB Prem Nagar (Bhiwani) from 1x500 MVA, 400/220KV Power T/F to 2x500 MVA, 400/220KV Power T/Fs (Agenda by HVPNL)

A.14.1. HVPNL has submitted that the proposal for Augmentation of 400 KV S/Stn BBMB Prem Nagar (Bhiwani) from 1x500 MVA, 400/220KV Power T/F to 2x500 MVA, 400/220KV Power T/Fs was submitted to BBMB, Chandigarh as an agenda for deliberation in the 146th BBMB Power Sub-committee meeting held on 25.11.2022.

A.14.2. During the 146th BBMB Power Sub-committee meeting, the Agenda was deliberated at length. However, the agenda was deferred due to non-consensus in the 146th Power sub-committee meeting of BBMB.

A.14.3. In 147th BBMB Power Sub-committee meeting scheduled on dated 25.7.2023, at item-I the agenda for replacement of existing 500MVA, 400/220/33 ICT Bank comprising 4nos. 1-phase 166.7MVA, 400/220/33kV TF with 1 no. 3-phase, 500MVA, 400/220/33 Auto Transformer at 400kV Substation BBMB, Bhiwani was discussed and all power utilities agreed to the proposal and accordingly proposal was approved by power sub-committee. The MoM of 147th PSC meeting was circulated vide BBMB Letter no. 22150-61/B-1684 PSC/4P/147 dated 03.08.2023.

- A.14.4. Director/P&D(TS) BBMB, Chandigarh office letter no. 1596-97/PNGS-778 dated 26.3.2024 requested to provide the latest status of the case of providing additional 500MVA, 400/220/33kV Auto-Transformer at 400kV S/stn. BBMB Bhiwani.
- A.14.5. The load flow study was carried out in line with the requirement of Additional 1x500MVA, 400/220/33kV ICT at 400kV BBMB, Bhiwani considering the impact of outage of existing 4 nos. 1-phase 166.67MVA, 400/220/33kV TFs bank on the underlying 220kV network and neighbouring 220kV system connected to 400kV BBMB Prem Nagar, Bhiwani.
- A.14.6. The following 2 nos. transmission elements are found overloaded in case of failure of existing 4 nos. 1-phase 166.67MVA, 400/220/33kV TFs banks at 400kV BBMB Bhiwani:
- 220kV I.A Hisar-Hisar (PGCIL) D/C line (Zebra Conductor).
 - 2x315MVA, 400/220kV ICTs at 765kV S/stns. PGCIL, Bhiwani.
- A.14.7. It is conveyed by PGCIL that there is no approved plan for augmentation of 765kV PGCIL Bhiwani from existing 2x315MVA, 400/22kV Transformation capacity to any higher capacity in near future.
- A.14.8. According to the load flow study, the outage of the existing 1x500MVA, 400/220kV ICT Bank at 400kV BBMB Bhiwani could lead to potential overloads on the 2x315MVA, 400/220kV T/Fs at the 765kV PGCIL and 220kV I.A Hisar-Hisar (PGCIL) D/C line, thereby compromising the n-1 contingency. Considering these findings, there appears to be a requirement for an additional 500MVA, 400/220/33kV ICT.
- A.14.9. 220kV D/C Sangroor (Punjab) and 220kV Khetri (Rajasthan) lines connected from 220kV BBMB Hisar and 220kV BBMB Dadri draw significant power from the 220kV IA Hisar-BBMB lines and 220kV Lula Ahir- BBMB Dadri Lines during outages of single 400/220kV ICT from the 400kV Substation Prem Nagar BBMB Bhiwani. This situation imposes considerable stress on the HVPNL infrastructure.
- A.14.10. During the Load flow study (copy attached as **Annexure-A.VII**) wherein following is observed:
- “Overloading has been observed on other circuit of 220kV IA Hisar-BBMB Hisar D/C line in Base Case (Existing Network) contingencies 1.10 (i.e outage of one ckt of 220kV IA Hisar-BBMB Hisar D/C line considering outage of 1x500MVA, 400/220kV ICT at 400kV S/stn Bhiwani BBMB) & 2.10 (i.e outage of one ckt of 220kV IA Hisar-BBMB Hisar D/C line considering outage of 1x500MVA, 400/220kV ICT at 400kV S/stn Bhiwani BBMB).”
- A.14.11. The load flow scenario mentioned at Sr.No. 10 above, comes in the scenario of n-1 contingency when 400/220kV ICT (base case) as well as one circuit of 220kV D/C IA Hisar- BBMB Hisar line is simulated to be out. However in such contingency situations BBMB may devise a suitable mechanism to limit the load flow to the 220kV Sangroor and Khetri lines during power outages from the 400kV BBMB Prem Nagar Bhiwani substation due to contingencies resulting in overburdening the HVPNL installation at various 220 kV Substations(i.e 220 kV IA Hisar and 220 kV Bhiwani).

A.14.12.After the proposed installation of 1x500MVA,400/220kV T/F at 400kv S/Stn Prem Nagar Bhiwani, power to the Sangroor(Punjab) and Khetri(Rajsthan) lines will be fed from the additional 400/220kV ICT at Prem Nagar Bhiwani in contingency situations of outage of 1st 400/220kV ICT and hence both States (Rajasthan & Punjab) will be benefitted by provision of additional 400/220kV ICTs at 400kV Prem Nagar Bhiwani.

A.14.13.Afterwards agenda was placed in 153rd meeting of Power Sub-Committee of BBMB dated 11.07.2025 wherein after deliberations, PSC members approved the following;

- “For further deliberation, NRPC approval to be first obtained by the HVPNL.
- The O&M arrangement and commercial & regulatory modalities are to be first discussed and decided in the committee constituted vide office order No. 332/B-1684/PSC/4P dated 27.03.2025 & 24.04.2025 “

A.14.14.Accordingly, CE/SO Commercial HVPNL Panchkula requested to CE/PD&C, HVPNL, Panchkula to take up the matter with NRPC in consultation with SLDC wing to put up the agenda in NRPC meeting for the installation of additional 1x500MVA,400/220kV T/F at 400kv S/Stn Prem Nagar Bhiwani (cost to be shared by all constituents i.e. Punjab & Rajasthan as per the power drawl by respective utilities).

A.14.15.Thereafter, the file was put-up for consideration and in circulation approval of Managing Director of HVPNL, Panchkula and the same was got approved for onward submission to SE/SLDC/Op HVPNL, Panchkula office for placing the agenda in NRPC meeting with the following scope of work: -

Sr.no.	Description of work
1.	To concur for the augmentation of 400kV BBMB, Prem Nagar, Bhiwani from 1x500MVA, 400/220/33kV ICTs to 2x500MVA, 400/220/33kV ICTs by BBMB during FY2026-27. Note: 1. Cost of proposed augmentation of 400kV Prem Nagar BBMB Bhiwani from 1x500MVA, 400/220kV ICT to 2x500MVA, 400/220kV ICTs will be shared by all constituent States. 2. During the contingency scenario when 400/200kV ICTs as well as one circuit of 220kV D/C IA Hisar- BBMB Hisar lines are out, BBMB will initiate for the load shedding/SPS arrangements on its circuits i.e. 220kV D/C Sangroor & 220kV S/C Khetri to mitigate overloading of the lines.

Members may kindly deliberate.

A.15. Proposed Noida-Ghaziabad— Khurja TPS Islanding Scheme (Agenda by UPSLDC)

A.15.1. UPSLDC has informed that for Noida - Khurja TPS Islanding Scheme, steady state feasibility study has been done by UPSLDC, which was found to be feasible (Study results attached as **Annexure-A.VIII**). Brief description of the Islanding Scheme is as follows:

- i. This Island shall feed the load of Noida Area and Ghaziabad Area (The details are attached in the report)
- ii. Load of Noida region shall be fed through 400kV Khurja TPS-Jalpura DC line. 400kV Khurja TPS-Jalpura DC line is under construction and expected to be commissioned in 6 month.
- iii. The steady state feasibility study has been done by considering the 400kV Khurja TPS- Jalpura DC line operational.
- iv. Load of Noida region predominantly comprises of load of data centers. Operational load of data centre is 125 MW against the sanctioned load of 600 MW. The steady state study has been done in both the scenario.

A.15.2. It is worth mentioning that success rate of Islanding Schemes depends on load-generation balance of island. However, the success rate of proposed Islanding schemes can be increased by incorporating df/dt relays with associated time delay, which shall take care of any excess or deficit in load/generation. Settings of df/dt relays can only be arrived at after dynamic study. In addition to above the study has been shared with Grid India and comments of the same is attached as **Annexure-A.IX**.

A.15.3. Therefore, UPSLDC has requested that the proposal for aforementioned islanding Scheme may be accepted and approval may be given for carrying out their dynamic study.

Members may kindly deliberate.

- LILO of both circuit of Ajmer - Chittorgarh 765 kV D/c line at Beawar
- LILO of 400 kV Kota – Mert
- Fatehgarh-III- Beawar 765 Split PDF files into pieces which creates new PDF files nos. of 765 kV line bays at Fatehgarh-III S/s)

The transmission scheme 'Rajasthan Phase-III (20 GW) Part G' is being implemented by Fatehgarh-III Beawar Transmission Limited (F3BTL) under TBCB with inter alia following elements:

- Fatehgarh-III-Beawar 765 kV D/c (2nd) line
- 2 nos. of 765 kV line bays at both at Beawar & Fatehgarh-III PS

Beawar Transmission Limited (BTL) and Fatehgarh-III Beawar Transmission Limited (F3BTL) are subsidiaries of M/s Resonia Limited. Further, Fatehgarh-III- Beawar 765

kV D/c (1") line (being implemented by BTL) is to be terminated at Fatehgarh-III PS in Bay Nos. 701 & 704 (bays being implemented by owner of Fatehgarh-III PS Le. POWERGRID). The Fatehgarh-III-Beawar 765 kV D/c (2) line (being implemented by F3BTL) is to be termin-ated at Fatehgarh-III PS in Bay Nos, 713 & 716 (bays being implemented by F3BTL).

M/s Resonia vide letter dated 13.01.2026 has informed that the both the Fatehgarh-III -Beawar 765 kV D/c lines are nearing completion and corresponding bays at Fatehgarh-III PS are completed. Further, M/s Resonia had requested to interchange the corresponding bays assigned for the Fatehgarh-III- Beawar 765 kV D/c lines in order to mitigate the 765 kV lines crossing near the substation and to facilitate the timely commission of the project.

- A.16.1. In the meeting Chairperson, CEA stated that the timely commissioning of the transmission scheme would provide relief in the ongoing RE curtailment issues in Rajasthan and therefore, requested M/s Resonia to expedite the completion of the Fatehgarh-III PS Beawar 765 kV line along with Beawar Station and its associated lines.
- A.16.2. After deliberations in the meeting, the proposal to terminate the Fatehgarh-III PS - Beawar 765 kV D/C (2nd) line (F3BTL - Part G) at Bay Nos. 701 and 704 (implemented by POWERGRID) and Fatehgarh-III PS - Beawar 765 kV D/C (Ist) line (BTL Part F) at Bay Nos. 713 and 716 (implemented by F3BTL) at the Fatehgarh-III Substation was agreed. Further, M/s Resonia was requested to put best efforts to expedite the completion of the Fatehgarh-III PS - Beawar 765 kV line along With Beawar Station and its associated lines by Feb/March 2026.
- A.16.3. Resonia has submitted that In compliance with the directions issued by the CEA and to meet the immediate system requirements, they have mobilized additional resources with multiple gangs on the ground and have incurred additional costs in an endeavor to match the timeline of March 2026. With respect to the current status, it may be noted that the works in relation to the Subject Elements are at an advanced stage and/or pre-commissioning checks are being conducted.
- A.16.4. In view of the above,
- In terms of the proviso to Regulation 27(1)(c)(ii) of the Grid Code, Resonia has requested for certification that the Subject Elements are required in the interest of the power system to improve performance, safety, and security of the grid, and is most urgent considering the prevailing curtailment of the T-GNA and urgent need for ISTS evacuation capacity in the State of Rajasthan, as also acknowledged by the CEA in the meeting.
 - In view of the power system requirement and aforementioned certification, allow declaration of COD for the Beawar S/s, LILO of KM Line and/or LILO of AC Line ahead of the COD of other elements otherwise pre-required/required to be commissioned simultaneously.

Members may kindly deliberate.

Detailed presentation on grid highlights of Feb'2026 will be shared by NRLDC in OCC meeting.

B.2. Resource adequacy for summer 2026

Considering the high demand expected in the upcoming months, the Ministry of Power (MoP), in the meeting held on 15-01-2026, has directed RLDCs to carry out Resource Adequacy studies for all States of their respective control regions (MoM Quote: Grid-India to carry out short-term Resource Adequacy assessments for the States and take up the matter with those States that have projected shortages in their control area).

Accordingly, NRLDC has conducted Resource Adequacy studies for all the northern region states for the period April-June 2026. The RA study results are enclosed as **Annexure-B.I** indicate an elevated adequacy gap in forecasted demand and available

generation from all sources in the April-June period, particularly during non-solar hours. A higher risk of unserved energy is observed during this period, highlighting the need for timely and firm power arrangements to meet the State demand smoothly.

Following was communicated vide NRLDC letter dated 04.02.2026:

- All NR States are advised to plan in advance for power procurement for the entire summer period (April–June and beyond).
- Early finalisation of firm GNA and bilateral arrangements may be ensured to adequately meet peak and shoulder-hour demand while maintaining sufficient reserve margins.
- Reliance on short-term market purchases for meeting peak summer demand should be minimised and treated only as supplementary.
- States may review the enclosed Resource Adequacy (RA) study and undertake detailed State-level analysis in coordination with DISCOMs / Power Management Companies, considering local demand patterns and resource availability.
- States are further requested to review their demand forecast submissions.
- A detailed source-wise bifurcation of ISGS allocations, in the prescribed format, along with updated details of any new or revised GNA / bilateral contracts for April–June 2026, may be furnished to facilitate refinement of the RA assessment and proactive summer preparedness planning.

As per IEGC clause 31

Quote

(4) Adequacy of Resources (a) SLDCs shall estimate and ensure the adequacy of resources, identify generation reserves, demand response capacity and generation flexibility requirements with due regard to the resource adequacy framework as specified under Chapter 2 of these regulations.

Hon'ble CERC had issued suo-motto order 9/SM/2024 dated 07.10.2024. Subsequently, a meeting was taken by Hon'ble CERC on 14.02.2025 with all NR SLDCs, NRLDC and NRPC to review the actions being taken at SLDC end on measures related to resource adequacy. CERC has also released "Report on Planning for safe, secure, and reliable integrated operation of the power system during critical periods arising on account of seasonal variations wherein the electricity demand increases rapidly by undertaking specific measures to mitigate the risks on the power system under Order dated 07.10.2024 in Suo-Moto Petition No. 9/SM/2024" on 29.04.2025.

With reference to the Clause 31(2) of Central Electricity Regulatory Commission-IEGC Regulations, 2023 and the Operating Procedure of NRLDC prepared in accordance with the same, each SLDC has to furnish the demand estimation for day ahead, week ahead, month ahead (with time block wise granularity) and demand estimation for year ahead (with hour granularity). The sub-clause 31(2) (h) of IEGC-2023 states the following timeline for the submission of demand estimate data to RLDC.

- all SLDCs are requested to timely furnish the demand estimation data along with generation adequacy data as per the formats available at https://drive.google.com/drive/folders/1KWY4G9gTBLV5wTJkhGEIeRptKP-QbhjL?usp=drive_link to NRLDC through mail (nrlcmis@grid-india.in) and FTP as per above timeline.
- all SLDCs need to take actions at their end for timely submission of demand forecasting and resource adequacy data on day-ahead, week-ahead, month ahead and year ahead basis.

Portal has been prepared for submission of data by states. The user credentials have been provided to all states of Northern region.

However, it is being observed that states are only submitting the generation availability and not the actual internal generation schedule. This leads to a situation wherein only surplus/shortage values are checked. This does not take into account the schedule changes in internal thermal generation which may be happening based on merit order to accommodate high solar generation during daytime.

During 240 OCC meeting,

- a) MS NRPC stated that all concerned SLDCs may take necessary actions as discussed in previous OCC meetings. It was mentioned that special attention may be given by SLDCs on demand estimation and Resource Adequacy data submission & ensuring adequate manpower in SLDCs.
- b) NRLDC representative highlighted that as per the directions from Ministry, no planned outages of generating units to be approved for Apr-June period. Accordingly, all planned outages may be expeditiously taken and work may be completed by March 2026.
- c) OCC forum asked all SLDCs to review the resource adequacy results and provide their comments along with the proposed tie-ups to avoid shortfall during Apr-Jun 2026.

State-wise summary of actions taken till date and latest state-wise status is shown below:

Note: *Others- Nuclear + RE + Bilateral & others

Planned outage is considered NIL and

Forced outage as per PRAS outcome.

UTTAR PRADESH

UP SLDC response

- UP SLDC concurred that the assumptions and inputs considered in the preliminary RA analysis are largely in order.
- Contract of about 1900 MW finalized through banking arrangements.
- Another ~1500 MW under process through DEEP portal, primarily to address anticipated gap during non-solar hours in June.

- Additionally, 500 MW of banking arrangement is presently under discussion with Karnataka and Andhra Pradesh to support the requirement during non-solar hours.
- Further, a 2000 MW bid is proposed to be placed in the LDC for the period 16 April to May. For June, it is planned that approximately 80% of the projected deficit will be put up for bidding in the LDC once the 90-day bid window opens. It is also informed that additional arrangements through TAM will be explored to reduce the dependency on DAM/RTM.
- Additional procurement options are being explored, as required.

Punjab SLDC response

- PSPCL confirmed assumptions broadly aligned.
- 2500 MW bilateral procurement has been finalized for June. An additional 1000 MW allocation from the Ministry of Power (MoP) is anticipated and has been factored into the GNA.
- Banking arrangements with HP for approximately 900 MW are presently under process for bidding.
- Further 500MW of AP load is likely to be shifted from non-solar hours to solar hours as a result of various works being carried out by the distribution wing of PSPCL before start of peak summer season. Additionally, district-wise staggering of AP load is under implementation.
- Historically, about 5000 MW of agricultural pump (AP) load was observed during non-solar hours; this is expected to reduce to around 4000 MW during non-solar hours in the current year.
- Provision for shifting approx. 500 MW of AP load by 1-2 hours in real time, subject to power availability/clearance. Additional procurement options being explored to ensure adequacy.

Chandigarh SLDC response

- Chandigarh concurred assumptions largely in order.
- Central allocation expected to increase from 9% to 14% during summer. This translates to ~100 MW additional allocation, assessed to be adequate to meet the anticipated gap.
- CPDL indicated that further procurement options will be explored, if required.

It may be noted that there can be issues in gas availability in near-future, so generation availability from other resources is essential and hence maximum generation should be made available during Apr-Sep period. All SLDCs are requested to review the resource adequacy results and provide their comments along with the proposed tie-ups to avoid shortfall during Apr-Jun 2026. Present data as available with NRLDC based on inputs received from states is attached as Annexure-B.II. Moreover, as the month of March is ongoing, utilities would have done their tie-ups for Apr 2026, the same may be shared with NRLDC and NRPC.

Members may please discuss.

B.3. SPS proposals in Rajasthan

Majority of 400/220kV ICTs in Rajasthan state (both interstate as well as intrastate are N-1 non-compliant). List of N-1 non-compliant ISTS substations is shown below:

Constrained location	SPS Status as available with NRLDC

3*315=945 MVA ICT at Bhiwadi(PG)	Approved and to be implemented
2*315+500=1130 MVA ICT at Bassi(PG)	Approved and to be implemented

3*315=945 MVA ICT at Kankroli(PG)	Approved and to be implemented
2*315=630 MVA ICT at Kotputli(PG)	Implemented
2*315=630 MVA ICT at Deedwana(RVPN)	Not planned

During 240 OCC meeting,

- POWERGRID representative informed that separate meeting was convened on 12.01.2026 to discuss list of feeders which are being reviewed at SLDC end.
- SPS has been implemented at 400/220kV Kotputli(PG)
- SPS shall be implemented at other substations of POWERGRID by end of Feb 2026.

POWERGRID and RRVNL may provide update.

B.4. State-wise transmission constraints anticipated during high demand season of 2026

During the high demand season, the transmission system in Northern region remains heavily loaded. Transmission constraints observed in the grid during high demand period are regularly being highlighted in OCC meetings. Same is also being submitted to CTUIL and CEA through quarterly operational feedback.

Even after several follow-ups, it is observed that progress of several transmission elements are not up to the mark and expeditious actions from transmission utilities are required so that minimal issues are observed at transmission level during the high demand season.

State-wise issues and measures required thereof are listed below.

Punjab:

In the 240 OCC meeting, Punjab SLDC representative stated that they have reassessed the ATC/TTC limit for paddy 2026. and shared assessment with NRLDC on 13.02.2026. NRLDC representative stated that the limits of 10950/11450MW submitted by Punjab SLDC seem in order as per preliminary studies, however, detailed studies shall be shared separately through email.

Subsequently, NRLDC vide email dated 24.02.2026 confirmed that ATC/TTC limits of Punjab shall be enhanced to 10950/11450MW upon commissioning of certain transmission elements.

Punjab SLDC may provide update on status of commissioning of:

- i. Commissioning of 2 no. 400/200kV 500MVA ICTs at 400kV Behman Jassa Singh (PSTCL)
- ii. LILO of one circuit of 220kV Mansa- Bathinda Refinery at 400kV Behman Jassa

- iii. Commissioning of 400/220kV 4th 500MVA ICT at 400kV Rajpura (PSTCL).
- iv. Conductor augmentation of 220kV Patran- Patran (PTCL) D/c from Zebra to HTLS.
- v. Commissioning of additional 2 no. 220kV inter-connecting circuits from 400kV Ropar to 220kV GGSSTP/Ropar.
- vi. Connectivity of 220kV Dhandari Kalan-Sherpur.

Haryana:

SPS proposals in Haryana

For SPS at 400/220kV Hissar(PG) ICTs:

During 240 OCC meeting,

Punjab SLDC expressed concern that opening of 220kV Hisar (BBMB) - Sangrur D/C line may lead to overloading of 220kV Ludhiana-Dhandharikalan lines as power will flow from Ludhiana to Dhandhari kalan to Jamalpur to Sangrur.

POWERGRID representative stated that ICT-4 at Hissar(PG) is expected by June 2026 (after diverting it from another location).

OCC forum discussed that as the feeders were already identified in meeting taken under SE(O) NRPC on 27.06.2025, accordingly, the proposed SPS was approved and POWERGRID was asked to implement it at the earliest. Further, Punjab SLDC was assured that this SPS operation would not impact the ATC/TTC of Punjab state control area.

Punjab SLDC was asked:

- to separately discuss with NRLDC regarding solutions to the issues raised by them.
- take up with PSTCL planning team to take up for additional supply source for 220kV Sangrur.

POWERGRID was asked to commission the ICT-4 at Hissar at the earliest.

POWERGRID, HVPNL and PSTCL may update.

For SPS at 400/220kV Panipat ICTs:

In the 240 OCC meeting, HVPNL updated that SPS at 400/220kV Panipat ICTs shall be commissioned before summer 2026.

EE (Protection), NRPC representative stated that the reason for time delay of 12 sec for wiring feeders for Panipat SPS need to be furnished and should be beyond protection setting time delays of transformers.

OCC forum asked NRPC to communicate their queries to HVPNL & BBMB and accordingly, the SPS logic can be approved in next protection subcommittee meeting of NRPC.

POWERGRID updated status of ICTs as following:

- 765/400kV Bhiwani ICT-IV: ICT received on site. Expected in March 2026
- 765/400kV Jhatikara ICT-V: Expected in May 2026. Bay location to be changed for bus reactor.

HVPNL and POWERGRID to update the status.

Uttar Pradesh:

In 240 OCC meeting,

UPPTCL representative informed that old 240MVA ICT at Obra is expected to be revived by March 2026 whereas 315MVA ICTs at Obra would be revived after some time due to requirement of procurement of ICTs. Matter shall be discussed in separate meeting with UPPTCL.

SPS proposals in Uttar Pradesh

UP SLDC informed that work order for SPS logic of 400/220kV Bareilly S/s has been placed. SPS at both 400/220kV Panki and Bareilly substation are expected to be commissioned by Mar 2026.

POWERGRID representative stated that SPS at Agra(PG) would be commissioned by Feb 2026 end, during planned shutdown of Agra(PG) ICTs.

POWERGRID, UPPTCL and UP SLDC are requested to provide update.

Uttarakhand:

In 240 OCC meeting, NRLDC representative stated that continuous violation of ATC/TTC limits and loading of 400/220kV Rishikesh ICTs beyond their N-1 limit is being observed since the commissioning of 400kV Koteshwar-Rishikesh D/C line. With the commissioning of 400kV Koteshwar-Rishikesh D/C line, the loading of Rishikesh ICTs is heavily dependent on mode of operation of Tehri PSP.

ATC/TTC limits and import by Uttarakhand state for the month of Dec2025-Jan2026 suggest that there is ATC/TTC limits violation almost on daily basis especially during 0800-1200 hrs in morning and 19-22 hrs in evening.

PTCUL representative presented the concerns and actions taken at their end for managing load of Rishikesh ICTs. Uttarakhand SLDC representative stated that due to the above overloading, SLDC is forced to open following intra-State lines to manage the load flow in the intra-State transmission system.

- ❖ 220 kV SIDCUL–Rishikesh,
- ❖ 220 kV Rishikesh–IIP,
- ❖ 132 kV Jwalapur–Roorkee,
- ❖ 132 kV SIDCUL–Roorkee line
- ❖ 132 kV Laltappar–Majra
- ❖ 132 kV Bindal–Majra

OCC forum discussed that 400kV Koteshwar-Rishikesh D/C line was approved in 2015-16 and the demand of Uttarakhand was much lower during that period. When studies were done back then, no constraint at 400/220kV Rishikesh ICTs was envisaged.

OCC forum asked CTUIL and PTCUL planning team to study loadings of line and ICTs in Rishikesh area in 2028-29 time frame.

Uttarakhand SLDC was asked to jointly study with NRLDC for any temporary relief measure for Rishikesh ICTs ensuring reliability of power supply. Uttarakhand SLDC was asked to share proposal from their side before next OCC meeting.

PTCUL and Uttarakhand SLDC may provide update.

ATC/TTC limits of states for the month of April 2026 are attached as **Annexure-B.III** of agenda. Utilities are requested to go through these limits and provide comments.

Members may please discuss.

B.5. SPS for Champa-Kurukshetra HVDC

There have been unplanned load loss that has taken place in two events related to simultaneous all poles outage of HVDC Champa-Kurukshetra namely,

1. 16.5GW load loss event on 17.06.2024 due to tripping of Champa-Kurukshetra all poles carrying 4000MW with NR total load as 89.4GW
2. 0.9GW load loss event on 09.06.2025 due to tripping of Champa-Kurukshetra all poles carrying 4300MW with NR total load as 82.6GW

The recommendations of Committee formed under Member (GO&D), CEA] to analyse 17th June 2024 are attached as **Annexure-B.IV**. NRLDC has been continuously pursuing with NR states to take measures for reactive power support at local level so that reactive power exchange from ISTS is minimal. However, as per discussions held in OCC meetings, no major progress is being reported. There is huge MVAR drawl by NR states during May-Sep months.

On 19th June 2024, the day NR demand reached maximum of 91.2 GW it can be seen that there was huge MVAR drawl by NR states from ISTS and seems to be following pattern of solar generation (maximum MVAR drawl at around 1pm) as shown below:

Accordingly, in 233 OCC meeting it was agreed to implement a SPS scheme which can shed loads in case of simultaneous outage of all poles of HVDC Champa-Kurukshetra. Since, identification and wiring of new load groups may be difficult for implementation in short time frame and further utilities have also expressed concerns in identifying further new feeders for UFR or other load shedding schemes, it was suggested to utilise the wired loads of existing Agra-Gwalior SPS scheme. Signal of multiple HVDC pole outage can be extended from Kurukshetra station to Agra SPS scheme and some load relief can be obtained. The automatic disconnection of wired loads post outage of multiple HVDC Poles at Kurukshetra may provide some relief and may help in containing the voltages till suitable static and dynamic compensation devices are commissioned.

Based on discussion in 240 OCC meeting, following tentative logics for SPS are proposed:

- Voltage in all 3-phases at Kurukshetra fall below 380kV and more than 50kV for 250ms: Shed load in Groups C and D
- Voltage in all 3-phases at Kurukshetra fall below 360kV and more than 50kV for 250ms: Shed load in all Groups

(Time delay increased considering LBB protection timing)

Voltage >50kV is being proposed so that SPS does not operate in case of any CVT data error.

Moreover, it was observed that bus voltages at Kurukshetra were reaching below 380kV during frequent commutation failures observed on 21.05.2025.

Accordingly, it is important that SPS logic resets immediately, so that in case of multiple voltage dip and recovery events, any maloperation of SPS may be avoided.

As the operation of SPS will result in load loss in NR, it is necessary that commensurate generation backing down in WR may also be done simultaneously which is already the case with existing Gwalior-Agra SPS. Accordingly, same backing down in WR may be done for this SPS of Champa-Kurukshetra HVDC link as for Gwalior-Agra SPS scheme.

Other OCC members are requested to:

- **Provide actions taken at their end in compliance to recommendations of MoP Committee constituted under Member (GO&D), CEA to analyse 17th June 2024.**
- **Approve proposed SPS logic**

Further, as Apr-Sep is the main high demand period of NR and availability of all poles of HVDC Champa-Kurukshetra is desirable, accordingly POWERGRID may plan to take any shutdown related activities of Champa-Kurukshetra HVDC by March 2026.

Members may please discuss.

B.6. Minimising deviation against scheduled drawl by Rajasthan state control area

It has been observed that some of the NR states have been under drawing from the grid in last few weeks. The under drawl in Energy terms has reached 8-12 MUs on daily basis as per the Daily Operation Report published by NRLDC. With inclement weather leading to load crash and lower demand, high frequency grid operation has been observed recently. NRLDC has been advising constituents to maintain load generation balance and messages are also regularly issued from Real time operators to the under-drawing constituents. Further, NRLDC has been pro-actively carrying out hydro moderation of ISGS plants in addition to TRAS down support from NLDC to arrest high frequency.

The details of daily under-drawl (MU) and max. under-drawl based on 5 minutes average telemetered data i.r.o. Rajasthan state control area is given below:

Rajasthan Deviation and grid frequency

Plots for deviation by Rajasthan state control area for 04-03-2026 & 05-03-2026 are shown below wherein it can be clearly seen that Rajasthan state was heavily under drawing from the grid during the day time.

Such large deviations from schedule and high frequency operation are a threat to the system security.

To avoid continuous high frequency operation in the grid, following actions may be ensured during real-time grid operation and maintaining drawal close to schedule:

- Portfolio management through sale of power in T-GNA
- Lifting of planned load shedding, curtailments, if any
- Generation backing down in coal fired thermal stations to 55% of Maximum Continuous Rating (MCR) loading of the units on bar at the generating station after deducting the normative Auxiliary Energy Consumption plus Auxiliary Energy Consumption compensation as per the provisions of the Grid Code as per merit order based on variable charges
- Downward revision of requisitions from ISGS as per merit order on request of beneficiaries

- Generation reduction at hydro stations having storage capability

As per recent analysis at NRLDC end there is lot of scope for further improvement in load generation balancing and maintaining drawl close to schedule by Rajasthan SLDC.

Rajasthan SLDC may please provide update.

B.7. Poor frequency profile after lunar eclipse on 03.03.2026

Grid frequency remained low for duration of 18:22 hrs. to 19:19 hrs. on 03.03.2026 and even reached to 49.42 HZ @18:52 hrs. Low frequency operation was due to high demand and very sharp rise in All India demand accompanied with high ramp rate (about 312 MW/per minute) from 18:10 hrs. during the lunar eclipse.

All India demand pattern for 02.03.2026 & 03.03.2026 are shown below:

In NR it was observed that Raj and Delhi were continuously overdrawing during the low frequency period. At 18:52 hrs, frequency touched 49.42HZ. During the same time the over draw of Raj and Delhi was 265MW and 470MW respectively.

Delhi's Demand Profile

A sharp ramp up of 650MW was observed from 18:00 hrs to 19:00 hrs. As intimated by Delhi SLDC, the sharp rise in demand is attributed to the geyser load which came in service during evening bath on account of lunar eclipse bath ritual. It was also observed that there was a net sale of quantum ranging from 56 MW to 197 MW in the power exchange by Delhi between 18:15 hrs and 19:15 hrs. From the Schedule vs Actual graph below it has been observed that there was no significant change in

schedule to meet the rise in demand. No UFR operation took place during the low frequency operation.

Rajasthan's Demand Profile:

From the above graph it has been observed that the Rajasthan's demand was lower by around 2500MW as compared to that of previous day. However, 18:54 hrs the gap has reduced to 150MW.

Rajasthan has sold upto max of 1000MW in DAM during 18:30 to 19:30 hrs.

Further, from day-ahead and real-time power exchange data, it is seen that neither Delhi nor Rajasthan had purchased in DAM/RTM rather, they had sold power in Day ahead market.

However, performance of UP state control area during this low frequency period was better and they supported in managing grid frequency. It seems that UP SLDC did some load management also to manage their deviations and support grid frequency during low frequency operation from 18:00hrs to 19:30 hrs.

The deviation by UP state and grid frequency profile for 03.03.2026 is shown below:

Accordingly, to maintain the Grid security all SLDCs are once again requested to take proactive steps as follows:

- Ensure that ADMS is in service and expedite its implementation if not commissioned.
- Ensure healthiness and availability of AUFLS and df/dt load shedding.
- Ensure revival of intra-state generators under economic shutdown/RSD based on requirement
- Ensure portfolio balancing through T-GNA/RTM market segments
- Ensure no under injection by the generators from schedule
- In case of inadequate margins in intrastate generators measures for emergency load regulation measures may be taken in interest of grid security.
- Pursue generators to expedite revival of thermal units under forced outage wherever feasible.

Moreover, following is latest status of monthly UFR certification as shared by NR states:

CHANDIGARH	Not Available
DELHI	Dec-2025
HARYANA	Sep-2025

PUNJAB	Dec-2025
RAJASTHAN	Dec-2025
UP	Jan-2026

All SLDCs are requested to take up the matter with concerned STUs and ensure that ufr in their state are in healthy condition.

B.8. Transmission elements under long outage

With the increase in temperature, demand of Northern Region starts increasing from March onwards every year. Summer of Northern region are typically hot and demand is also high during this time, therefore advance actions help in better grid operation. During the high demand season, the transmission system in Northern region remains heavily loaded.

Accordingly, it is desirable that maximum number of transmission elements remain in service so that transmission element loadings do not become very high. Number of transmission elements in NR grid are under prolonged outage such as:

Further, as per information available with NRLDC, following transmission lines are in service through ERS since long time. Accordingly, it is requested that concerned transmission utilities may plan for revival of transmission lines on normal towers so that ERS set is available for other contingencies that may happen in near future.

All transmission utilities are advised to strictly adhere to the approved timelines so that grid operation is not affected and other shutdown requests are also timely

allowed. Further, it is requested to update likely revival date for these in the NRLDC outage portal and expedite revival of these transmission elements.

B.9. Mock testing of islanding scheme and simulation studies

Following four islanding schemes are operational in the Northern Region: NAPP Islanding Scheme (Uttar Pradesh), RAPP Islanding Scheme (Rajasthan), Bawana Islanding Scheme (Delhi), and Unchahar Islanding Scheme (Uttar Pradesh).

- NAPP Islanding scheme (UP)
- RAPP Islanding scheme (Raj)
- Bawana Islanding scheme (Delhi)
- Unchahar Islanding scheme(UP)

There have been recent directions from NPC and MoP also for islanding testing.

As per Clause 29.10 and 29.11 of the IEGC:

“(10) RPCs shall prepare the islanding schemes in accordance with the CEA Grid Standards for identified generating stations, cities and locations and ensure their implementation. The islanding schemes shall be reviewed and augmented depending on the assessment of critical loads at least once a year or earlier, if required.

*(11) Mock drill of the islanding schemes shall be **carried out annually** by the respective RLDCs in coordination with the concerned SLDCs and other users involved in the islanding scheme. In case mock drill with field testing is not possible to be carried out for a particular scheme, **simulation testing** shall be carried out by the respective RLDC.”*

The most recent mock testing of the operational islanding schemes in the Northern Region was conducted as under:

- NAPP Islanding Scheme – 30.01.2025
- RAPP Islanding Scheme – 21.03.2025
- Lucknow–Unchahar Islanding Scheme – 16.05.2025 (simulation files for FY 2025–26 are yet to be received)
- Delhi Islanding Scheme – 19.02.2025 (presently non-operational due to removal of LILO of 400 kV Mandola–Bawana at Maharani Bagh; DTL has been advised by the NRPC forum to review the scheme)

The SOP for mock testing of islanding schemes in the Northern Region was approved during the 223rd OCC meeting held in September 2024.

In compliance with the above provisions of the IEGC, it is requested to submit the requisite data and report, as stipulated in the approved SOP, to facilitate successful conduct of mock testing of islanding schemes for FY 2025–26 at the earliest.

Communication have already been sent from NRLDC side vide email dated 16.02.2026 & 03.03.2026.

In case of non-availability of gas generation at Bawana, other islanding scheme with generation of Dadri NTPC / IGSTPP NTPC (Jhajjar) may also be explored for maximizing the chances of survival of critical loads in Delhi.

Concerned SLDCs are requested to provide update on field testing and simulation-based testing of each islanding scheme.

B.10. Enhancing support from transmission utilities for day to day grid operation

a) STATCOMS day to day mode change operations

With the increasing penetration of Renewable Energy generation, particularly solar power, the grid in RE pockets is experiencing frequent oscillations during high solar generation hours. In such situations, STATCOM devices play a very crucial role in maintaining voltage stability and damping system oscillations. It has been observed that changing the operating mode of STATCOMs from Auto Mode to Dead Band / Fixed Reactive Power (Q) Mode, depending upon system requirements, helps in mitigating these oscillations almost instantly. Such timely intervention supports better voltage control and improves overall grid stability in renewable-dominant areas.

However, it has been observed that whenever a code or instruction is issued to PGCIL for changing the STATCOM operating mode, there is often a delay in implementation because the operation is currently carried out from the field level. This time lag can reduce the effectiveness of immediate corrective action required during oscillatory conditions.

If the operation of STATCOM mode change is enabled through remote facilities such as NTAMC or RTAMC, the mode switching can be performed instantly. This would significantly enhance the response time during system disturbances or oscillatory events, thereby improving grid reliability and operational efficiency in RE dominated regions.

b) Out-source Employee at Crucial RE Sub Stations

On 14th January 2026, when multiple trippings occurred at Bhadla , Sikar and Fatehgarh III Substation, delay in response and information sharing was observed. When Northern Regional Load Despatch Centre contacted Fatehgarh III control room, the outsourced employee present there stated that they were not authorized to share operational information and asked to contact POWERGRID directly.

Such situations may delay critical communication during grid disturbances; therefore, it is suggested that important RE substations should be manned by authorised, regular and trained personnel to ensure timely coordination and grid security.

The deployment of outsourced employees at critical renewable energy substations of PGCIL may create operational challenges, as RE substations operate under dynamic conditions and require quick response during disturbances.

Members may please discuss.

B.11. Multiple element tripping events in Northern region in the month of

February 2026:

A total of 14 grid events occurred in the month of February 2026 of which 12 are of GD-1 category, 01 is of GI-2 Category and 01 is of GI-1 Category. The tripping report of all the events have been issued from NRLDC. A list of all these events along with the status of DR/EL & tripping detail submission is attached at **Annexure-B.V.**

Maximum delayed clearance of fault observed in event of tripping event at Rajasthan RE Complex, 400/220kV RAPP_D(NP) and 400kV Tehri PSP(TH) at 11:33 hrs on 16th February 2026 (As per PMU at RAPP-C(NP), consecutive three 3-phase voltage dips were observed with voltage recovery time of 80 ms, 4360 ms and 80 ms).

Delayed clearance of fault (more than 100ms for 400kV and 160ms for 220kV system) observed in total 03 events out of 14 grid events occurred in the month. In 05 (no.) of grid events, there was no fault in the grid.

As per IEGC clause 37.2 (c), Disturbance Recorder (DR), station Event Logger (EL), Data Acquisition System (DAS) shall be submitted within 24 hrs of the event and as per IEGC clause 37.2 (e), the user shall submit a detailed report in the case of grid disturbance or grid incidence within one (1) week of the occurrence of event to RLDC and RPC.

It is observed that DR/EL & tripping report of most of the grid events are not being submitted as per timeline specified in IEGC 2023. Non availability to tripping details further hampers the grid event analysis at RLDC level.

Members may take necessary preventive measures to avoid such grid incidents / disturbances in future and share the report of actions taken by respective utilities. Moreover, utilities may impress upon all concerned for providing the Preliminary Report, DR/EL & Detailed Report of the events to RLDC in line with the IEGC clause 37.2 (c) & (e).

Members may like to discuss.

B.12. Status of submission of DR/EL and tripping report of utilities for the month of February 2026:

The status of receipt of DR/EL and tripping report of utilities for the month of February 2026 is attached at **Annexure-B.VI**. It is to be noted that as per the IEGC provision under clause 37.2 (c), the tripping report along with DR/EL has to be furnished within 24 hrs of the occurrence of the event. However, it is evident from the submitted data that reporting status of RE stations, SLDC-HR, SLDC-PS, SLDC-J&K, SLDC-Delhi, INDIGRID, BBMB and RAPS is not satisfactory and needs improvement.

Members may please note and advise the concerned for timely submission of the information. It is requested that DR/EL of all the trippings shall be uploaded on Web Based Tripping Monitoring System "https://postda.nrlcdc.in/Default.aspx" within 24

hours of the events as per IEGC clause 37.2(c) and clause 15.3 of CEA grid standard. Apart from prints of DR outputs, the corresponding COMTRADE files (.cfg/.dat) may please also be submitted in tripping portal.

Members may like to discuss.

B.13. Frequency response performance for the reportable events of month of February 2026:

During the month of **February 2026**, **3 no. of reportable events** were notified by NLDC for which FRC/ FRP need to be calculated. Description of the event is as given in the Table below:

S. No.	Event Date	Time (In hrs.)	Event Description	Starting Frequency (in Hz)	Nadir Frequency (in Hz)	End Frequency (in Hz)	$\Delta f(\text{Hz})$	NR FRP during the event
1	13-Feb-26	12:14 hrs	As reported, at 12:14 hrs on 13th February 2026, generation loss event of 740 MW occurred in RE generation complex, NR. Hence generation loss of 740 MW is considered for FRC/FRP Calculation.	49.926	49.776	49.913	-0.013	-2.34
2	22-Feb-26	22:56 hrs	As reported, at 22:56 hrs on 22.02.2026, generation loss event of 1470 MW occurred in Sterlite Thermal Power Plant, ER. Hence generation loss of 1470 MW is considered for FRC/FRP Calculation.	50.040	49.887	50.003	-0.037	2.43
3	22-Feb-26	23:00 hrs	As reported, at 23:00 hrs on 22.02.2026, load loss event of 1353 MW occurred in Sterlite Thermal Power Plant, ER.	49.917	50.081	50.012	0.095	0.51

			Hence load loss of 1353 MW is considered for FRC/FRP Calculation.					

As per IEGC 2023 Clause 30.8, "The primary response of the generating units shall be verified by the Load Despatch Centres (LDCs) during grid events. The concerned generating station shall furnish the requisite data to the LDCs within two days of notification of reportable event by the NLDC."

As per IEGC 2023 Clause 30.10.(n), "Each control area shall assess its frequency response characteristics and share the assessment with the concerned RLDC along with high resolution data of at least 1 (one) second for regional entity generating stations and energy storage systems and 10 (ten) seconds for the state control area."

As per sub-clause (a(v)) of clause (9) of IEGC 2023 Annexure-2, "All the SLDCs shall work out FRC for all the intra-state entities (for events indicated by the Regional Load Despatch Centres) based on the HDR available at their respective SLDCs and submit the same to respective RLDC within six (6) working days after the event. (Format as per Table-B)."

As per sub-clause (a(vi)) of clause (9) of IEGC 2023 Annexure-2, "All regional entity generating stations shall also assess the FRC for their respective stations and submit the same to respective RLDC within six (6) working days. (Format as per Table-B). The high-resolution data (1 second or better resolution) of active power generation and frequency shall also be shared with RLDC."

Members are requested to share the FRC/FRP computation of their respective control area as per the timeline specified in IEGC 2023.

Frequency Response Performance (FRP) of generating stations for each reportable event are calculated based on the submitted high resolution data from generating stations. However, the generating stations for which data is not received **till 08th March 2026**, FRC/FRP as per NRLDC HDR data is used for computation of Average Monthly Frequency Response Performance, Beta ' β ' for Generating Stations.

From the FRP data, it is observed that FRP of many of the control areas are not satisfactory. Therefore, it is requested to review the FRC/FRP, governor actions of your respective control area, necessary actions may be taken for improvement in the FRC/FRP.

Status of details received from constituents and FRP values as considered for the events of **February 2026** are attached as **Annexure-B.VII.**

B.14. Mock trial run and testing of black start facilities at generating stations in Northern Region

As per Indian Electricity Grid Code (IEGC) clause 34.3

*“Detailed procedures for restoration post partial and total blackout of each user system within a region shall be prepared by the concerned user in coordination with the concerned SLDC, RLDC or NLDC, as the case may be. The concerned user shall review the procedure every year and update the same. **The user shall carry out a mock trial run of the procedure for different sub-systems including black-start of generating units along with grid forming capability of inverter based generating station and VSC based HVDC black-start support at least once a year under intimation to the concerned SLDC and RLDC.** Diesel generator sets and other standalone auxiliary supply source to be used for black start shall be tested on a weekly basis and the user shall send the test reports to the concerned SLDC, RLDC and NLDC on a quarterly basis”.*

Hydro and gas-based plants are capable of self-black-start. Conducting periodic mock black start exercises are extremely important to ensure the healthiness of black start facilities and also to build awareness as well as confidence among the system operators.

In view of above, regional entity generating stations shall conduct the dead bus charging of their units on rotation basis as per availability of schedule under intimation to the NRLDC. Testing of Diesel generator sets and other standalone auxiliary supply source to be used for black start shall also be done on a weekly basis. SLDC shall also ensure the same in their respective control area. This will ensure the healthiness of blackstart facility at generating stations. Further, NRLDC shall coordinate with the ISGS and states to conduct the mock black start exercise of subsystems.

Therefore, regional entity generating stations and SLDCs are requested to share the annual schedule plan for conducting dead bus charging / mock black start exercise of generating stations /sub-systems during 2025-26. The present status of mock black start of generating units is attached as **Annexure-B.VIII**. Constituents are also requested to share the test report of diesel generators / auxiliary supply on a quarterly basis.

15.	Dhauliganga	05.02.2026
16.	Chamera-II	06.02.2026

Therefore, ISGS and SLDCs are requested to take following actions:

- **To share the tentative schedule of mock black start exercise of generating stations in their respective control area.**
- **SLDCs are requested to share the tentative schedule plan of mock black start exercise of generating stations in their respective control area.**
- **To conduct dead bus charging after self-starting the generating station if schedule with load is not available.**
- **To share the test report of mock black start exercise conducted along with weekly DG testing on monthly/quarterly basis.**

Sir,

Following inputs may be considered from NRLDC :

1. 400 kV bus reactors at Sikandarabad and Aligarh may be taken out during islanding formation to improve the overall voltage profile of the island.
2. The viability of the proposed island is contingent upon commissioning of the 400/220 kV Jalpura Substation. The same may duly be factored in while finalizing the island configuration.
3. Following 132 kV substations are seen operating close to 0.9 pu and may require review/re-assessment before inclusion in the island scheme:

S. No.	Substation	Voltage Level (kV)	Voltage (pu)
151630	DPH	132	0.9019
151428	BSR_RD_LALKU	132	0.9031
151765	BSR-II	132	0.9051
151146	IND_A_GZ	132	0.9054
151572	PRATAP VIHAR	132	0.9119

4. A significant portion of the proposed island load comprises large data center installations. Given that such loads are predominantly power-electronic in nature (UPS systems, rectifier-inverter blocks, precision cooling systems, and high-density IT server loads), their dynamic response to voltage and frequency deviations during island formation can impact island stability.

Considering the high-reliability design philosophy of data centers (including rapid transfer to captive DG sets during disturbances), there exists a credible risk of abrupt load rejection if voltage or frequency excursions exceed permissible limits during island formation. Such sudden loss of large blocks of load may lead to over-frequency conditions and generation-load imbalance within the island.

Accordingly, the following technical inputs (including and not limited to) should be obtained from the respective data center operators and factored in the detailed dynamic study of island formation :

- Implemented protection settings, including:
 - Active power vs. voltage (P-V) ride-through characteristics
 - Active power vs. frequency (P-f) behavior

- Under/over-voltage trip thresholds and associated time delays
- Under/over-frequency trip thresholds and time delays
- RoCoF (df/dt) settings, if enabled
- Automatic transfer logic to DG/backup generation
- Detailed operational load curves (diurnal and seasonal variation) to determine actual loading level at the instant of island formation

Based on the above observations and the steady-state assessment submitted by UP SLDC, the proposed islanding scheme appears technically feasible **under steady-state operating conditions**. However, implementation should be subject to confirmation through comprehensive dynamic studies, including transient stability, frequency response, and small-signal stability analysis, incorporating realistic composite load modeling of data center behavior to ensure stable island formation.

Minutes of the meeting held on 20.01.2026 under the Chairperson, CEA regarding modification in the termination arrangement at Fatehgarh-III PS for transmission lines under schemes Rajasthan Phase-III Part F and Part G

List of participants is enclosed at **Annexure-1**.

Background:

The transmission scheme 'Rajasthan Phase-III (20 GW) Part F' is being implemented by Beawar Transmission Limited (BTL) under TBCB with inter alia following elements:

- Establishment of 2x1500 MVA, 765/400kV Beawar Substation
- LILO of both circuit of Ajmer - Chittorgarh 765 kV D/c line at Beawar
- LILO of 400 kV Kota – Merta line at Beawar
- Fatehgarh-III – Beawar 765 kV D/c line (Developer of Fatehgarh-III S/s to provide 2 nos. of 765 kV line bays at Fatehgarh-III S/s)

The transmission scheme 'Rajasthan Phase-III (20 GW) Part G' is being implemented by Fatehgarh-III Beawar Transmission Limited (F3BTL) under TBCB with inter alia following elements:

- Fatehgarh-III – Beawar 765 kV D/c (2nd) line
- 2 nos. of 765 kV line bays at both at Beawar & Fatehgarh-III PS

Beawar Transmission Limited (BTL) and Fatehgarh-III Beawar Transmission Limited (F3BTL) are subsidiaries of M/s Resonia Limited. Further, Fatehgarh-III – Beawar 765 kV D/c (1st) line (being implemented by BTL) is to be terminated at Fatehgarh-III PS in Bay Nos. 701 & 704 (bays being implemented by owner of Fatehgarh-III PS i.e. POWERGRID). The Fatehgarh-III – Beawar 765 kV D/c (2nd) line (being implemented by F3BTL) is to be terminated at Fatehgarh-III PS in Bay Nos. 713 & 716 (bays being implemented by F3BTL).

M/s Resonia vide letter dated 13.01.2026 has informed that the both the Fatehgarh-III – Beawar 765 kV D/c lines are nearing completion and corresponding bays at Fatehgarh-III PS are completed. Further, M/s Resonia had requested to interchange the corresponding bays assigned for the Fatehgarh-III – Beawar 765 kV D/c lines in order to mitigate the 765 kV lines crossing near the substation and to facilitate the timely commission of the project.

Deliberations in the meeting:

1. M/s Resonia stated the present on-ground configuration of terminating bays at Fatehgarh-III PS would necessitate the crossing of the 765 kV lines of F3BTL & BTL near the Fatehgarh-III PS and the crossing of lines would delay the completion of transmission lines for few more months. Therefore, BTL line to be allowed to terminate at bay assigned with F3BTL line and the F3BTL line to terminate at bays assigned with BTL line, as this would facilitate the timely completion of lines that are planned for evacuation of RE power from Rajasthan.
2. CEA/CTUIL stated that as no technical issue has been envisaged in interchanging the 765 kV bays at Fatehgarh-III PS for termination of the 765 kV Fatehgarh-III PS – Beawar lines.

3. CTUIL stated that with the proposed arrangement of terminating the BTL line in the bay implemented & assigned to F3BTL line, and terminating the F3BTL line in the bay implemented by POWERGRID & assigned to BTL, would be a deviation from the TSAs and the signed Connectivity Agreements.
 4. It was confirmed that there would not be any change in the scope of works being implemented by respective TSPs under transmission schemes and only the assignment of termination bays for 765 kV lines at Fatehgarh-III PS would be changed.
 5. Grid India, citing operational issues, suggested that crossing of lines near the sub-station may be avoided as the maintenance shutdown of a 765 kV line many times necessitates the shutdown of other 765 kV line crossing over it.
 6. Chairperson, CEA opined that in order to resolve the practical difficulty of line crossing, and since there exists a possibility of terminating lines in a straight and more optimal manner, the proposed interchange of bays for termination may be permitted. Further, the ownership of these bays will remain as per the original scope of the scheme and the O&M of the bays could be done as per Operation and Maintenance (O&M) guidelines issued vide CEA's letter dated 22.06.2023.
- ✓ Chairperson, CEA added that the timely commissioning of the transmission scheme would provide relief in the ongoing RE curtailment issues in Rajasthan and therefore, requested M/s Resonia to expedite the completion of the Fatehgarh-III PS – Beawar 765 kV line along with Beawar Station and its associated lines.

Decisions taken in the meeting:

After deliberations, the proposal to terminate the Fatehgarh-III PS – Beawar 765 kV D/c (2nd) line (F3BTL - Part G) at Bay Nos. 701 and 704 (implemented by POWERGRID) and Fatehgarh-III PS – Beawar 765 kV D/c (1st) line (BTL - Part F) at Bay Nos. 713 and 716 (implemented by F3BTL) at the Fatehgarh-III Substation was agreed. Further, M/s Resonia to put best efforts to expedite the completion of the Fatehgarh-III PS – Beawar 765 kV line along with Beawar Station and its associated lines by Feb/March 2026.

- ii) Minutes of the meeting held on 20.01.2026 under the Chairperson, CEA

Respected Ma'am,

1. We are writing on behalf of Beawar Transmission Limited (BTL).
2. Pursuant to tariff based competitive bidding, BTL is implementing the *Transmission System for Evacuation of Power from REZ in Rajasthan (20 GW) under Phase-III Part F (Part F Project)*.
3. In terms of the TSA, referenced at S. No. 2, BTL is required to implement the following elements as part of its transmission project:
 - a. Establishment of 2x1500MVA 765/400kV Substation at suitable location near Beawar along with 2x330 MVA 765kV Bus Reactor & 2x125 MVA 420kV Bus Reactor (**Beawar S/s/Element 1**)
 - b. LILO of both circuit of Ajmer-Chittorgarh 765 kV D/c at Beawar (**LILO of AC Line/Element 2**)
 - c. LILO of 400 kV Kota – Merta line at Beawar (**LILO of KM Line/Element 3**)
 - d. Fatehgarh-3 PS - Beawar 765 kV D/c along with 330 MVA Switchable line reactor for each circuit at each end of Fatehgarh-3- Beawar 765 kV D/c line (**FB Line/Element 4**)

furtherance of the directions issued by the CEA to BTL in the meeting held on 20.01.2026, referenced at S. No. 1 above, we are writing this letter to seek requisite certification in terms of Regulation 27(1)(c)(ii) of the CERC (Indian Electricity Grid Code) Regulations, 2023 (Grid Code).

5. For the reasons detailed in the ensuing paragraphs, in terms of the proviso to Regulation 27(1)(c)(ii) of the Grid Code, as *extracted below*, BTL humbly seeks the certification of the Northern Regional Power Committee on the requirement of the Beawar S/s, LILO of KM Line and/or LILO of AC Line (hereinafter, referred to as the **Subject Elements**) in the interest of the power system, such that they must be commissioned prior to the remaining elements, otherwise required to be commissioned simultaneously.

Relevant Extract: Regulation 27(1)(c)(ii) of the Grid Code

"27. *DECLARATION OF COMMERCIAL OPERATION (DOCO) AND COMMERCIAL OPERATION DATE (COD)*

...

(c) Transmission System

...

(ii) The COD of a transmission element of the transmission system under Tariff Based Competitive Bidding shall be declared only after the declaration of the COD of all the pre-required transmission elements as per the Transmission Services Agreement:

Provided that in case any transmission element is required in the interest of the power system as certified by the concerned RPC(s), the COD of the said transmission element may be declared prior to the declaration of the COD of its pre-required transmission elements."

REASONS/DETAILS IN SUPPORT OF OUR REQUEST

A. Facilitating Critical Evacuation of RE Injections:

6. In addition to BTL's Project/**Part F Project**, Fatehgarh 3 Beawar Transmission Limited (F3BTL) is implementing the *Transmission System for Evacuation of Power from REZ in Rajasthan (20 GW) under Phase-III Part G (Part G Project)* which *inter alia* comprises of the 765 kV D/C Fatehgarh-III–Beawar (2nd) line (**F3BTL Line**) with two 765 kV bays each at Fatehgarh-III and Beawar S/s.
7. Part G and Part F Projects are critical ISTS links in the State of Rajasthan required for evacuation of approx. 20 GW additional RE power from Fatehgarh, Bhadla and Ramgarh. In view of the recent 4.3 GW T-GNA in Rajasthan, timely commissioning of ISTS capacity has become the most pertinent priority for the State, RE generators as well as the consumers.
8. With the commissioning of the Subject Elements under the scope of BTL, the evacuation path for RE power from the Fatehgarh complex to Beawar and onward dispersal of power

beyond Beawar to various beneficiaries, as intended, would be as below, providing immediate outlet for renewable injections:

Fatehgarh-III S/s → 765 kV Fatehgarh-III–Beawar (Part G)/F3BTL Line → Beawar S/s → downstream via the LILO of KM Line and/or LILO of AC Line

9. The Subject Elements can be energized and placed in service as a coherent evacuation path when connected to the F3BTL Line, enabling immediate injection and onward evacuation of RE power from Fatehgarh-III towards the downstream 400 kV network.
10. This staged approach is consistent with the Grid Code's objective of bringing into commercial operation those elements whose commissioning improves performance, safety, and security of the grid post RPC certification.
11. The commissioning of the Subject Elements will allow evacuation of 1000-5000 MW of RE power – providing a substantial outlet for evacuation of RE power – thereby fulfilling an urgent requirement of the RE generators in Rajasthan.
12. The Subject Elements are likely to be commissioned in the month of March 2026 as directed by the CEA in the meeting referenced at S. No. 1.

B. Squarely in the Interest of the Power System

13. In the meeting held under the Chairmanship of CEA Chairperson on 20.01.2026 (Ref. No. 1 above), timely commissioning of the Fatehgarh-III–Beawar corridor together with the Subject Elements was heavily emphasized upon. It was categorically stated that timely commissioning of the transmission scheme would provide relief in the ongoing RE curtailment issues in Rajasthan and CEA had directed expeditious completion of the Subject Elements.
14. The present request for certification, once allowed, will aid in mitigation of the heavy losses being faced by the RE generators who are unable to evacuate power due to the ongoing T-GNA curtailment, the ultimate consumers and enhance grid performance.

C. Mobilization and near-term readiness

15. In compliance with the directions issued by the CEA and to meet the immediate system requirements, we have mobilized additional resources with multiple gangs on the ground and have incurred additional costs in an endeavor to match the timeline of March 2026. With respect to the current status, it may be noted that the works in relation to the Subject Elements are at an advanced stage and/or pre-commissioning checks are being conducted.

16. In view of the above, our humble request to the Hon'ble NRPC is as below:

- a. In terms of the proviso to Regulation 27(1)(c)(ii) of the Grid Code, kindly certify that the Subject Elements are required in the interest of the power system to improve performance, safety, and security of the grid, and is most urgent considering the prevailing curtailment of the T-GNA and urgent need for ISTS evacuation capacity in the State of Rajasthan, as also acknowledged by the CEA in the meeting cited at S. No. 1 above.

- b. In view of the power system requirement and aforementioned certification, allow declaration of COD for the Beawar S/s, LILO of KM Line and/or LILO of AC Line ahead of the COD of other elements otherwise pre-required/required to be commissioned simultaneously.
17. Our request is aligned with the applicable Regulations and will enable timely addition of margins for urgent evacuation of RE power in the State of Rajasthan – which is the need of hour in view of recent 4.3 GW T-GNA curtailment.
18. With the present request being allowed, in addition to BTL, the RE generators in the region, in whose projects substantial public money has been invested, as well as the end consumers stand to benefit heavily.
19. We remain committed to ensure full compliance with the Grid Code's commissioning and testing framework for all concerned elements and we will coordinate with RLDCs for all required trial operations and certifications as applicable.
20. We trust this request will receive your urgent consideration in view of the clear benefits involved for the power system and the beneficiaries.

Yours faithfully,

For Beawar Transmission Limited (BTL)

T. Amarendranath Reddy

Resource Adequacy Study Analysis for NR States

April to June 2026

Resource Adequacy Study using PRAS- Key assumptions

- The Probabilistic Resource Adequacy Study (PRAS) for the summer period from April to June 2026 has been carried out to assess the adequacy of available generation resources to reliably meet the projected state demand under a range of uncertainty scenarios. The assessment has been conducted using a probabilistic framework comprising 1000 Monte Carlo scenarios, with median outcomes presented to represent the expected system behaviour under typical operating conditions.
- To evaluate the net load to be met by dispatchable thermal generation, the forecasted hourly demand for the summer period (April-June 2026) was first estimated based on historical demand pattern and growth. From this projected demand, the expected contribution from non-thermal generation sources, namely solar, wind, hydro, and nuclear, was deducted.
- The contribution from non-thermal resources has been estimated using historical summer generation profiles, with solar and hydro generation scaled for capacity additions while retaining observed variability, intermittency, and seasonal operational characteristics.
- In the RA assessment, GNA contracts of the corresponding months from the previous year have been considered, duly scaled to account for demand growth. Short term Bilateral and market transactions have not been explicitly modelled.

Resource Adequacy Study using PRAS- Key assumptions

- To assess the availability of dispatchable generation resources, detailed modelling of thermal and gas-based generating units has been undertaken with the following assumptions:
 - ✓ **Planned Outages:** Planned outages has been considered NIL.
 - ✓ **Forced Outages:**
Forced outages of thermal generating units have been modelled using a Monte Carlo simulation approach. Historical unit-specific outage and restoration rates have been used to probabilistically simulate unplanned outages.

This stochastic modelling enables realistic representation of operational uncertainties and enhances the robustness of the resource adequacy assessment.

The probabilistic framework enables estimation of reliability metrics such as:

- ✓ **Loss of Load Expectation (LOLE)**
- ✓ **Expected Unserved Energy (EUE)**

PRAS Outcomes – Key Observations & Way Forward

(Summer: April–June 2026)

Observations

PRAS results indicate elevated adequacy risk during summer peak conditions, particularly during early morning and evening hours, when demand remains high and solar generation is unavailable.

The analysis highlights intermittent but significant unserved energy events, with higher frequency and magnitude observed during May–June, coinciding with extreme demand days.

While mid-day hours benefit from solar generation, peak-hour adequacy remains sensitive to demand variability and generation availability.

Way Forward

In view of the above, States are advised to strengthen advance resource planning for the summer period, including:

- Early finalization of firm GNA / bilateral contracts to adequately cover peak and shoulder-hour demand.
- Limiting reliance on short-term market mechanisms (DAM/RTM) for meeting peak summer requirements and treating market purchases as supplementary.

States are requested to review the PRAS outcomes at their end and undertake further state-level analysis, considering local demand conditions, resource availability, and contingency scenarios.

To enable revision of the PRAS assessment, States may kindly share updated inputs, including:

- Any new or revised GNA / bilateral contracts not captured in the current study.
- Updates on generation availability, renewable capacity additions, and demand outlook.

Disclaimer: PRAS results are indicative and intended to support advance planning under uncertainty.

Resource Adequacy Study Analysis for NR States

April to June 2026

Resource Adequacy Study using PRAS- Key assumptions

- The Probabilistic Resource Adequacy Study (PRAS) for the summer period from April to June 2026 has been carried out to assess the adequacy of available generation resources to reliably meet the projected state demand under a range of uncertainty scenarios. The assessment has been conducted using a probabilistic framework comprising 1000 Monte Carlo scenarios, with median outcomes presented to represent the expected system behaviour under typical operating conditions.
- To evaluate the net load to be met by dispatchable thermal generation, the forecasted hourly demand for the summer period (April-June 2026) was first estimated based on historical demand pattern and growth. From this projected demand, the expected contribution from non-thermal generation sources, namely solar, wind, hydro, and nuclear, was deducted.
- The contribution from non-thermal resources has been estimated using historical summer generation profiles, with solar and hydro generation scaled for capacity additions while retaining observed variability, intermittency, and seasonal operational characteristics.
- In the RA assessment, GNA contracts of the corresponding months from the previous year have been considered, duly scaled to account for demand growth. Short term Bilateral and market transactions have not been explicitly modelled.

Resource Adequacy Study using PRAS- Key assumptions

- To assess the availability of dispatchable generation resources, detailed modelling of thermal and gas-based generating units has been undertaken with the following assumptions:
 - ✓ **Planned Outages:** Planned outages has been considered NIL.
 - ✓ **Forced Outages:**
Forced outages of thermal generating units have been modelled using a Monte Carlo simulation approach. Historical unit-specific outage and restoration rates have been used to probabilistically simulate unplanned outages.

This stochastic modelling enables realistic representation of operational uncertainties and enhances the robustness of the resource adequacy assessment.

The probabilistic framework enables estimation of reliability metrics such as:

- ✓ **Loss of Load Expectation (LOLE)**
- ✓ **Expected Unserved Energy (EUE)**

Chapter 10: Recommendations

The following remedial measures are recommended to avoid recurrence of such grid events:

10.1 Reactive Power Management (Dynamic/Static):

In order to maintain voltage stability, reactive power support is desired from all grid connected utilities without leaning over each other so as to ensure minimum reactive exchange at different voltage levels.

a. Generators

- The generating units including those near load centre stations shall keep their PSS/AVR in service for dynamic reactive power support and stability during contingencies.
- The generating stations, both conventional as well as renewable, shall provide their P-Q capability curve for 0.95 per unit and 1.05 per unit voltage along with the curve based on 1 (one) p.u. terminal voltage. The voltage-dependent reactive support shall be assessed based on the submitted voltage-dependent capability curves.

b. Transmission

- The transmission system shall be planned and commissioned to ensure reactive power balance at all voltage levels in the grid. For this, different operating scenarios shall be studied to identify the reactive power requirement. Any deficit so identified shall be followed by augmenting the dynamic/static reactive power sources by transmission system planners (CEA/CTU/STUs).
- The placement and sizing of STATCOM/SVC shall be planned in such a way that the dynamic reactive support from STATCOM/SVC are not utilized in steady-state. It will ensure that in case of grid contingencies, full dynamic range is available for the grid support.
- Also, the design philosophy of future STATCOMs may be adopted so as to ensure the availability of dynamic reactive reserve for any contingency.
- State-wise reactive power compensation requirement (Dynamic & Static) may be studied in a holistic manner so that states do not lean over the ISTS system for reactive power support.

c. Load Centres

- Adequate static/dynamic reactive devices may be planned at the distribution level near loads so that there is minimum drawl from reactive sources at the transmission (STU) level. States may explore the deployment of capacitor banks at lower voltage levels for meeting the reactive support required by loads having poor power factor.
- The dynamic reactive power sources shall be commissioned near load centre stations based on the composition and quantum of individual load type.
- System studies for appropriate locations and suitable size of switchable capacitor banks, STATCOM/SVC etc. may be carried out. Early action on deployment and installation is needed.
- As shown in the study results, the behaviour of the system is entirely different with different load models viz. composite and ZIP load model. Hence, accurate load modelling is very important to properly capture the right behaviour of the system in the operational planning phase. Same may be considered in the planning stage studies as well as while assessing the TTC/ATC of control areas.
- It is recommended that a suitable SPS scheme may be planned which shall operate after outage of HVDC Champa – Kurukshetra Bipole to obtain relief in the voltage.

- The load centres (non-pit head locations) usually experience low voltage-related issues during peak demand periods. The presence of thermal generators near the load centres may significantly improve the voltage profile and can provide dynamic reactive power support in case of contingencies improving the stability.

10.2 Reliable operation of HVDC Champa - Kurukshetra:

- Between January to June 2024, there have been more than 30 instances of tripping of HVDC Champa-Kurukshetra poles (list enclosed as **Annexure – 13**). Detailed fault analysis of the 800 kV HVDC Champa-Kurukshetra link and other affected components is essential to understand the root cause of the event. Implementing remedial measures based on this analysis can prevent recurrence and enhance the reliability of this critical interregional link.
- All trippings have been analyzed by POWERGRID in consultation with OEM and it has been concluded that trippings have occurred mainly due to mal-operation of DCCT, T-zone protection mal-operation, 5005/5008 card failure, system failure issue and de-paralleling failure issue. Based on the identification of issues, necessary modification of software and hardware is already in process and under trial. POWERGRID to expedite the implementation of measures at the earliest.
- HVDC Champa-Kurukshetra tripping took place due to a transmission line fault at location 1805 (falling under Village - Chamarra, Block -Panwari, Distt- Mahoba, Uttar Pradesh) caused by flashover between jumper conductor and tower body under localised storm/heavy wind condition. Even though this is the only line fault that took place during the last one year in this line and no record of fault at this location since commissioning, it is very important that further improvements in O&M of the transmission line may be done in view of the criticality of HVDC line. In order to control the jumper swing use of additional pilot insulators, addition of counterweight and insulation sleeve on the jumper conductor and DMR wherever required may also be deployed. Increased line patrolling during summer and at vulnerable locations need to be ensured to check infringements and foreign materials.
- As per existing configuration, both DMR-1 & DMR-2 is connected together electrically at both terminals of HVDC through disconnectors. Online isolation of DMR during power flow or fault condition is not possible. To improve the reliability of system under DMR fault condition auto-isolation of DMRs and NBGS after discussion with OEM of HVDC may be explored in consultation with HVDC OEMs.

Figure 94: DMR current differential protection

- As DMR-1 was available, an assessment is needed to determine if Pole-1 & 3 could have remained operational with DMR-1, given the power order was not excessively high (~1100 MW total). The periodic review of healthiness of DMR is important to assess the healthiness

- of HVDC lines. Protocol for periodic healthiness checking of DMR may be formulated by the utility.
- f. Standard DMR line fault protection philosophy may be incorporated in RfP Document for future HVDC projects in consultation with OEM i.e. The closing of NBGS may be reviewed (in consultation with OEMs) for DMR line protection sequence during Bipolar operation for future HVDC projects.
 - g. HVDC systems have huge number of filter banks which provides MVAR support in addition to serve the basic purpose of harmonics filtration. It may be beneficial to get benefit of filter banks for MVAR support during low voltage condition subject to technical feasibility without compromising the safety of HVDC system as such.
 - h. A SPS scheme can be explored where filter banks of HVDC are tripped in succession after blocking of HVDC poles, this would help in limiting the dip in voltage after blocking of HVDC poles.
 - i. However, the immediate protective removal of filters is highly required in existing LCC HVDC during blocking of bipoles to avoid sudden voltage overshoot at connected AC BUS. In order to mitigate abrupt voltage rise/fall during filter switching, the filter switching scheme of HVDC in case of protective pole tripping should be based on antecedent AC bus voltage. If the voltage is lower/higher than a set value, the switching of filter bank/ part of filter bank may be avoided until the voltage recovers to that level.

10.3 Implementation of Overvoltage protection setting:

It was also observed that better over-voltage protection settings are required specially when there is sharp rise in voltage. In such cases voltage based time grading need to be carried out on different lines based on various factors. A review of overvoltage stage-1 protection settings on all 765KV lines emanating from northern region substations was carried out. Based on the deliberations, following is recommended for implementing overvoltage Stage-I protection settings:

- a. Pick up voltage & time delay setting of Antitheft lines to be kept low with sufficient time gap from other lines at S/s
- b. Parallel lines grading to be done such that one line should trip early by setting at low voltage and other line should trip last by keeping setting at high voltage.
- c. Highly loaded lines should be given last priority in tripping.
- d. Net MVAR relief (based on line charging MVAR & MVAR compensation in line) based on the simulation to be considered for arriving at the priority of line tripping. Lines providing high net MVAR relief to be tripped early.
- e. Grading to be done in such a manner that one major incoming and outgoing line shall remain connected after tripping of lines at any node.
- f. Protection setting of remote end station of a line need to be coordinated so as to avoid tripping of line from other end.
- g. Drop-off to pick-up ratio of Relays implemented for overvoltage protection shall be more than 99.5%.

10.4 Frequency Response by Generating Units

- a. The performance of primary response by generating units in this event underscores significant concerns regarding the inadequate governor response being provided by generators.

- b. It is recommended that the performance of generating units where inadequate primary response was observed shall be discussed at RPC level. The remedial measures shall be explored including carrying out of onsite primary response testing.

10.5 Compliance of CEA Standards by Renewable Generating Plants:

- a. Protection settings of inverters/WTG shall be coordinated in such a way that it accounts for the voltage rise/drop between inverter/WTG terminal & Point of interconnection (POI). Overvoltage /undervoltage trip settings should be configured accordingly.
- b. The reactive power controller settings (droop, deadband, power factor, operating modes) in inverters/WTGs should be configurable and shall be set in consultation with the respective load dispatch centre.
- c. The protection settings of elements in collector system viz. transformers, cables etc. shall such that it allows RE plants to ensure the compliance of CEA standards at POI.
- d. RE plants shall ensure that the event records shall be shared with SLDC/RLDC within the stipulated time for event analysis. All such data shall be retained in a retrievable format in a suitable archival system.

10.6 Compliance of Standards by Load Serving Machines

- a. The motors serving load shall be compliant with IS/IEC, this shall ensure following:
 - i. Limiting MVAR drawl during low voltage period.
 - ii. Avoiding unwanted tripping due to voltage fluctuations.
 - iii. Improved power factor
- b. It is suggested that the protection settings of 1-ph AC compressors, 3-ph HVAC compressors in large commercial complexes, mall etc., agricultural motors etc. may be reviewed and suitable standard for the same may be notified.

10.7 Amendments in Existing Regulations

With the envisaged large-scale addition of different emerging types of loads i.e. electrolyzers, data centres and other power electronic interfaced loads, it is important that the suitable provisions for ensuring reliable operation may be added in the existing CEA standards.
